

Touch Keypad

PTE0230

Overview:

The JVA Touch Keypad is the new touch sensitive keypad for the setup, control and monitoring of all Z series security energizers and monitors. Get your site setup quickly by programming JVA Z Series devices via the touch screen interface. Quickly arm or disarm all or individual zones via pin protected buttons. The fluid user interface is updated in real time providing peace of mind at a glance. The always persistent top bar keeps you informed of any alarms and displays a pulse animation in time with the energizers. Email notifications can be configured to alert you of every alarm as and when they occur. View the onboard log of each and every user authenticated action or alarm.

Features:

- Quick and intuitive energiser and monitor programming in just a few presses
- Fast and fluid user interface – similar to that of your phone or tablet
- Check the status at a glance with energiser pulse animations and colour coded fence conditions updated in real time
- Onboard database stores every arm and disarm against the user that authorized it
- Remain in control with email notifications about every alarm
