

JVA 4-Line LCD Keypad

PTE0240

Overview:

The JVA 4-Line LCD Keypad is an integral component in the JVA security electric fence product range. Providing a centralised interface between the customer and their perimeter security solution; it displays the current condition of each security device connected and can draw attention to adverse fence conditions. The keypad is used to control individual fence energizers, monitors or the entire site. The customer has access to all of these features via a menu driven system or by entering key sequences. Security installers also use the keypad to configure the JVA security devices to the customer's needs.

Improvements compared to the PTE0210:

- LCD display is more than twice the size to show more information on each page
- Fully featured menu system
- Installer sub-menu for advanced features
- Menu driven programming of supported devices
- Quick arm / disarm keys
- Real time clock for event reporting
- 500 entry event log includes date and time of event
- Zone name changes are easy with multi-touch entry
- Automated energizer calibration system
